New Hardy Everblooming

Coles' *Fuchsia riccartoni* "Scarlet Beauty"

(Patent Applied For — Propagation Rights Reserved)

Words cannot do justice to this plant, nor can printer's ink depict its countless flaming scarlet blooms. Picture to yourself an upright plant having from twenty to thirty stems which at maturity attain a height of 3 feet, and which, from the middle of June until severe frosts, will bear upward of five thousand flowers $1\frac{1}{2}$ inches long, of rose-red, with corolla of mulberry purple and you will visualize that which is the great, nationwide "Plant Sensation."

Fuchsia riccartoni "Scarlet Beauty" can be used effectively in the front of shrub plantings or to face down large screens. Its foliage is far superior to most plants in the hardy border, retaining its glossy, holly-green appearance from Spring until after frosts. In northern Ohio, it withstands frosts until November 15th on the average.

Fuchsia riccartoni, "Scarlet Beauty" is a herbaceous plant which freezes to the ground each Winter after the manner of Butterfly Bush. In the Spring and early Summer it quickly comes up from eyes which form below the surface of the ground, established plants gaining a height of 2 feet or more by the latter part of June.
